

Feed Bubbles the Fish

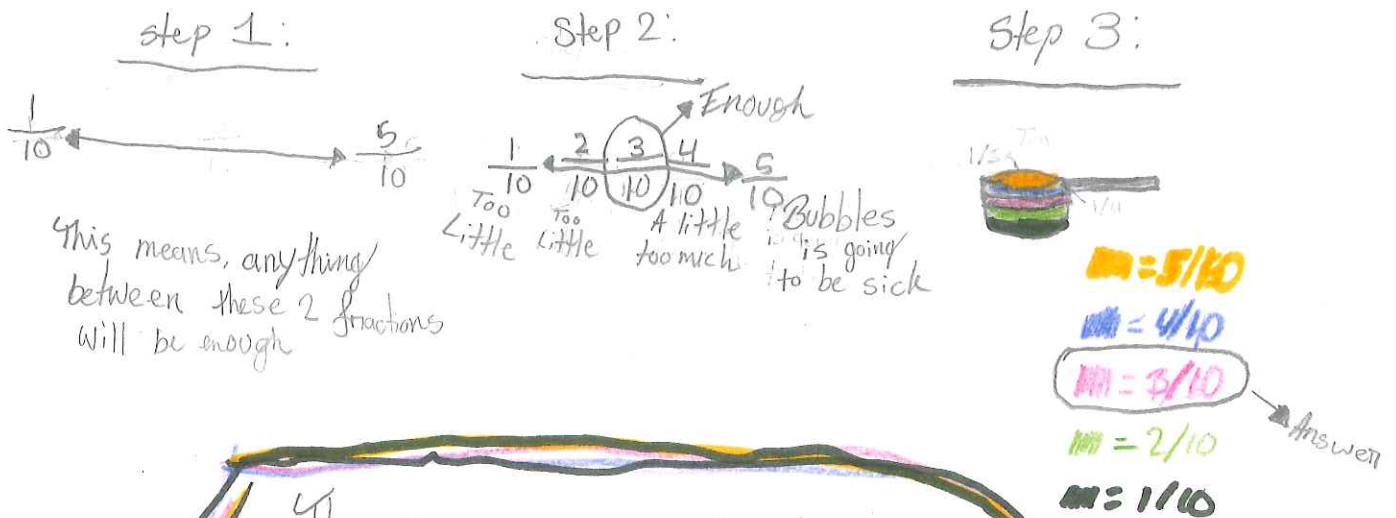

Bubbles the Fish is so hungry! How much food should Bubbles get? Be careful to not feed Bubbles too much, because he will get sick.

Bubbles needs more than 0.1 of a teaspoon of food, and less than 0.5 of a teaspoon of food.

Your measuring spoon only shows fractions!

What fraction of a teaspoon of food would be a good serving for Bubbles?

Be sure to explain your thinking and show your work.

The answer is $3/10$ because it is in the middle, $1/10$ is almost no food, $2/10$ is very little, $4/10$ is a little too much, & $5/10$, he's going to get sick. $3/10$ is perfect
