Dear Ms. Snyder,

I know you are designing a new playground and I would like to help. I think you should add a spinning seat to your playground.

A spinning seat is a circular seat with a pole through it. You sit on the seat, hold onto the pole, and someone has to spin it by holding on the pole and turning it. A spinning seat is a wheel and axle. The forces involved in using the spinning seat are push, friction, and gravity.

A spinning seat is a good idea because some people like to go fast. Second it is a good exercise for your arms. Third it does not take up a lot of space. Finally, a spinning seat is a lot of fun.

I hope you put the spinning seat on your playground. The students will enjoy it!

Sincerely,

**CAMPBELL SCHOOL**
