

I Respect

Bobby: "You really can't make a true friend without them respecting you and you respecting them."

I Cooperate

Scarlett: "I learned to work in groups without telling people what to do I am willing to listen, help and cooperate with my classmates. This used to be difficult for me."

I Try

Vincent: "The area of my improvements and growth is stepping out of my comfort zone and trying new things. I didn't want to eat lunch in the cafeteria because the noise level and I didn't want to go to recess because it's too chaotic and noisy. My teachers helped me change my mindset and the way that I was thinking so I can withstand the noise level and be outside with my friends and eat lunch in the cafeteria. They helped me by pushing me out of my comfort zone and letting me get used to it at the same time."

I Learn

Chance: "When I was in 4th grade I was more mischievous than ever. I kept climbing on the playground equipment. The teachers told me to get down. When I said no I got sent to the principal's office. My behavior has changed after I learned how to control my actions. Then, I joined safety patrol and I walked kids to their classes"

I Discover

Isla: "The outdoor classroom has helped me grow by making me more observant of my surroundings. Ms. Christy helped me discover about gardening, animal life, and cooking. We planted plants, turned the compost, and cleaned the pond."

I Serve

James: "One way I grew was learning about poor people. Ms. Davitt helped my by showing us about a website called Food for the Poor. We raised money by bringing in change everyday and we also had a bake sale. We raised a couple hundred dollars. In the future I will know how to help people in need. And I will teach other people how to help."

I Reflect

Emily: "I used to not really try to do things better because I always wanted to do things right the first time, but now I get why I should keep trying and I do try over and over if I can make something better. I always reflect and try to do things better like when I was having trouble in science, I always reflected to see what I had to improve on in science."
